

Quality & Environmental Policy

ISO 9001 & ISO 14001

Provision of geospatial solutions including satellite imagery, topography, alteration mapping, and associated insights is carried out with a strong commitment to quality excellence and environmental protection in accordance with ISO 9001 and ISO 14001 standards.

High standards of quality management and environmental responsibility are embedded in all our activities to ensure continual improvement, pollution prevention where appropriate, and sustainable service delivery.

Our organization is committed to meeting all applicable legal, regulatory, and other requirements relevant to quality, environmental aspects, and stakeholder expectations.

Technical excellence in delivering geospatial solutions is achieved through robust project management, validation, verification, and effective process control.

Operational controls are implemented across all processes to ensure consistency, reliability, data integrity, and, where appropriate, reduced environmental impact in our services.

Sustainable practices are integrated into all operations to minimize environmental footprint and promote efficient use of energy, materials, and natural resources.

Adherence to ISO 9001:2015 and ISO 14001:2015 requirements underpins our Integrated Management System and drives continuous improvement across all activities.

Total customer satisfaction and enhanced environmental performance are continually monitored and improved through objectives, performance indicators, internal audits, and management review processes.
